

Dear Hiring Manager,

I am a Senior Product Designer with 9+ years of experience designing complex, data-intensive products across defense, intelligence, SaaS, AI, and API-driven platforms. I do not just make interfaces look clean. I drive measurable outcomes: a 73% improvement in user retention, a 30% increase in onboarding completion, and a 40% reduction in design-to-dev handoff time, delivered across products used by enterprise clients including PayPal, Worldpay, Verizon, and PostNL in 178+ countries.

At Rapidev, I currently lead design for 10+ mission-critical intelligence and defense platforms, including OSINT tools, lawful interception systems, radio dispatchers, AI chatbots, and anti-drone solutions, working across 10 cross-functional teams and delivering 15+ successful platform releases within deadline. These are high-security, real-time operational environments where usability is not a preference but a requirement, and where design decisions directly affect how analysts and operators make decisions under pressure.

Previously at APIMatic, I led end-to-end UX for a Developer Experience Portal serving a global audience across 178+ countries, designing 6 core products including an AI Copilot, Analytics Dashboard, and API Editor. I built a complete Atomic Design System from scratch, establishing design ops practices that standardized workflows across 5+ product squads and cut design-to-dev handoff time by 40%.

What sets me apart is the ability to operate at both ends of the design spectrum: deep inside complex technical workflows with engineering teams, and high up in product strategy with stakeholders. I bring heuristic evaluation, A/B testing, and data-driven iteration through Mixpanel and Microsoft Clarity, alongside a strong command of Figma, Ant Design, and scalable component systems.

I am looking for a role where design has real influence on product direction. If your team is building something complex and needs a designer who thrives in that environment, I would welcome the conversation.

Sincerely,

Muhammad Saad
